Mastitis is inflammation of the mammary gland (s) associated with bacterial infection. It occurs in postpartum bitches and less commonly in postpartum queens. Rarely, mastitis is seen in lactating pseudopregnant bitches. Risk factors for developing mastitis include poor sanitary conditions, trauma inflicted by offspring, and systemic infection.

Mastitis in Small Animals - Reproductive System - Merck

...

Small ruminant mastitis is generally a chronic and contagious infection: the primary sources are mammary and cutaneous carriages, and spreading mainly occurs during milking. Somatic cell counts (SCC) represent a valuable tool for prevalence assessment and screening, but predictive values are better in ewes than in goats.

Mastitis of dairy small ruminants - Vetjournal

Mastitis is an important disease of small ruminants used in dairy production and the prevalence of mastitis varies depending on management. Most mastitis occurs in a subclinical form and producers who do not routinely measure individual animal SCC will not be able to determine the impact of subclinical mastitis on production and milk quality.
