Read Online The Art Of Computer Virus Research And Defense Peter Szor

A computer virus is a type of computer program that, when executed, replicates itself by modifying other computer programs and inserting its own code. When this replication succeeds, the affected areas are then said to be "infected" with a computer virus. Computer viruses cause billions of dollars' worth of economic damage each year, In 1989 The ADAPSO Software Industry Division published ...

supports macros in order to execute its code.

What Is A Computer Virus? | Norton

Once a computer virus is running, it can infect other programs or documents. Obviously, the analogy between computer and biological viruses stretches things a bit, but there are enough similarities that the name sticks. People write computer viruses. A person has to write the code, test it to make sure it spreads properly and then release it.
