The New Encyclopedia of Reptiles and Amphibians: Halliday ...

Some 360 million years ago the ancestors of today's reptiles and amphibians emerged from the sea to take on the challenge of land. This successful venture climaxed in a spectacular 140-million-year domination of the Earth by the dinosaurs. Today there are more than 11,000 species of reptiles and amphibians living in all parts of the world.

Amphibians are cold-blooded animals that possess backbones and display features that lie between those of fish and reptiles. They spend time both in water and on land. Their larvae (not yet fully developed offspring) mature in water and breathe through gills, like fish, while adults breathe air through lungs and skin.
