The configuration subsystem exposes a set of "factory" MBeans that are responsible for creating configuration objects of a certain type. Each factory MBean exposes either one or two create-operations used to create new configuration objects (a create operation that accepts more parameters allows for defining optional configuration object ...

Configuration Subsystem Details

The elements in the configuration match the names of the fields in the Mojo. The mapping is straight forward, the url element maps to the url field, the timeout element maps to the timeout field and the options element maps to the options field. The mapping mechanism can deal with arrays by inspecting the type of the field and determining if a suitable mapping is possible.

Maven - Guide to Configuring Plug-ins

If you already use this file for other SDKs and tools (like the AWS CLI), you don't need to change anything to use the files in this SDK. If you use different credentials for different tools or applications, you can use profiles to configure multiple access keys in the same configuration file.
