But all parameters are given, except the value of the EMI filter L_{in} (red circle in the diagram). I will need to know how to calculate the value of L_{in} . Looking at the datasheet, the reference design uses 30mH. I do not know if that is a fixed value? This is my first SMPS design. Any thoughts please? Thanks y'll.

Flyback SMPS Input EMI Filter Design | AC-DC Converters

The major source of EMI in SMPS power supplies can be traced to their inherent design nature and switching characteristics. Either during the process of conversion from AC-DC or DC-DC, the MOSFET switching components in SMPS, turning on or off at high frequencies, create a false sine wave (square wave), which may be described by a Fourier series as the summation of many sine waves with ...

A more complex filter is presented in Figure 3. It is often called the total EMI filter. The basic structure is similar with the simple EMI filter. There are some extra elements, two inductors, L_{d1} and L_{d2} and one condenser C_{x2} connected in a low pass configuration. FIGURE 3. A Complete EMI Power lines Filter C_{x1} - Line to Line ...

Advanced SMPS Topics: EMI Filtering - YouTube

Almost every switched-mode power supply (SMPS) needs an EMI (Electro Magnetic Interference) input filter to suppress any disturbances of the SMPS on the power lines. This requirement having an input filter in the design ensures that no negative effect will occur in other parts of the systems connected to the power lines.

PI filter: Different states have different EMI rejection standard. This design confirms EN61000-Class 3 standard and the PI filter is designed in such a way to reduce the common-mode EMI rejection. This section is created using C1, C2, and L1. C1 and C2 are 400V 18uF capacitors. It is an odd value so 22uF 400V is selected for this application.
